

“Preparation for volcanic disasters”

- 1 First, it is important to be aware of the risk of volcanic disasters in your region.
- 2 Be on alert for the volcanic information released by the meteorological observatory.
- 3 Confirm your evacuation site and routes.
- 4 Please evacuate ahead of time according to the evacuation instruction.
- 5 Check items that you will take with you on evacuation in preparation for emergency.
- 6 Be on alert for mudflows and debris flood caused by heavy rain or melting snow, and also dry avalanche caused by large-scale land slide.
- 7 Please be cautious about the accumulation of volcanic ash that may cause destruction of houses as ash becomes very heavy when it becomes wet.
- 8 If ash accumulates on the road, please drive cautiously.
