

## Announcement on Swine Fever

September 17, 2019

On September 14, some pigs at a prefectural facility were found infected with the swine fever\* virus.

Please note that:

Swine fever does not affect humans.

Pork meat infected with swine fever will not be sold in the market. Even if you eat it, it will not affect your health.

However, please remove the dirt from your shoes and clothes if you have been in the mountains.

\*Swine fever is a disease that infects pigs and wild boars.
